

**Appln No. 10/667,248**

**Amdt date January 26, 2006**

**Reply to Office action of October 6, 2005**

**Amendments to the Abstract:**

The invention relates to a A bone fixing system comprising ~~at least one~~ a nail, the nail including a longitudinal bore defining an inner wall of the nail and at least one transverse bore, ~~in particular a femoral medullary nail, and at least one screw, in particular a condyle screw,~~ The system also includes a screw which can be guided through [[a]] the transverse bore formed in the nail and defining the transverse bore being configured to define the orientation and the position of the screw with respect to the longitudinal axis of the nail. ~~with at least one A clamping member is being provided which can be introduced into [[a]]~~ the longitudinal bore of the nail and is axially adjustable in the longitudinal bore relative to the nail, ~~with the . The screw is~~ guided through the transverse bore of the nail being able and is adapted to be clamped between the clamping member and the inner wall of the nail bounding the transverse bore by the displacement of the clamping member.
